

AGILE VS. WATERFALL

of dev teams use agile.

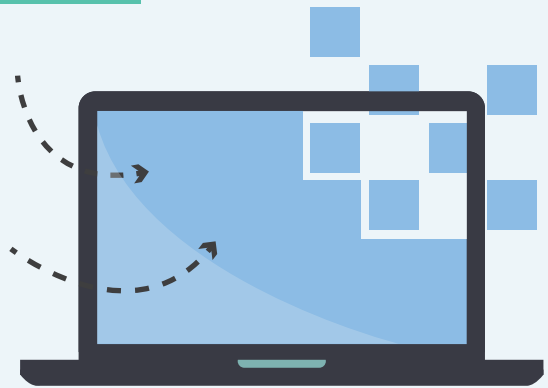

deploy new builds on a weekly basis – at least.

of agile teams use other techniques as well.

WATERFALL WON'T GO AWAY. AGILE IS CLEARLY PERVASIVE, BUT TEAMS KEEP GOING BACK TO ALTERNATIVE METHODS. WHY?

AGILE

Great for ongoing projects.

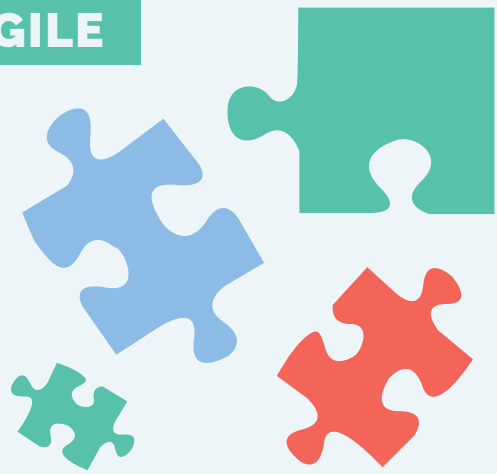

VS

WATERFALL

Perfect when you have simple specifications and clear-cut deliverables.

AGILE

Breaks complex efforts into digestible chunks.

VS

WATERFALL

Helps teams get right down to business on straightforward projects.

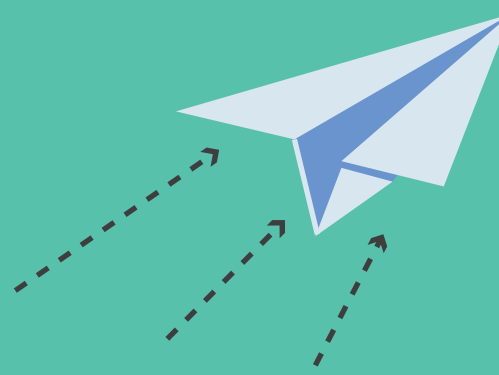

AGILE

Empowers teams with creative thinkers and flexible leaders.

VS

WATERFALL

Natural fit for teams that prefer highly structured, linear methodologies.

Agile may have won the battle, but it looks like the fight between the two isn't going away as businesses still depend on apps and services that benefit from the clear progression of waterfall over the elasticity of agile.

LEARNING TREETM
