01

WHAT IS INTEGRATE.IO

A single dashboard to understand when & why data is slow, stuck, or unavailable.

Integrate.io, now available for a free 2-week trial, is a real-time analytics platform that collects metrics from your data infrastructure and transforms them into actionable insights about your data pipelines, apps, and users who touch your data.

02

THE SHIFT TO DATA SERVICES

Moving to the cloud means building massive data lakes to process increasing amounts of data.

Data teams build complex ETL “assembly lines” to move data from source into cloud warehouses. The warehouses are provided as a service to external teams.

Dozens of internal “data apps” connect to the warehouses to generate reports, feed AI models, or serve applications.

Data teams lack the tools to effectively monitor, troubleshoot, and resolve bottlenecks in these complex systems. Resource issues, contention, or bad queries cause reporting dashboards to be stale, applications to go down, or block data scientists from doing their work.

03

WHY INTEGRATE.IO

Integrate.io is a unique, first-in-class product that empowers you to take control of your data infrastructure like never before.

No more fighting fires or pointing fingers. No more being last to know when there are issues. No more guessing about what is wrong with your data pipelines or how to fix it. No more guessing about how many resources you need to scale your data.

Have the confidence to handle all the raw data that your business needs to be successful.

04

WITH INTEGRATE.IO YOU CAN...

1

SPOT PROBLEMS BEFORE USERS DO

- Measure/trend performance of all queries/Apps
- Detect rogue and resource wasting queries
- Monitor behaviour of individual users

2

HAVE CONFIDENCE TO SCALE YOUR DATA VOLUME

- Optimize concurrency & memory configurations
- Get more out of storage - find “cold” tables
- Detect bottlenecks that cause queries to be slow

3

ELIMINATE THE FIRE FIGHTING

- Root cause analysis of performance issues
- See the cost of user queries & their resource impact
- Find the jobs or users consuming storage.

05

HOW IT WORKS

Integrate.io's unique technology provides a meta-layer of understanding of complex data infrastructure.

1 CLOUD-NATIVE COLLECTOR

An agentless solution that works in serverless environments and runs in your VPC to collect metric data. Currently deployed in regulated environments.

2 APP TRACING

Query-wrapping technology that traces apps and their performance across connected apps, from dashboard tools to workflow orchestration.

3 INTEGRATIONS

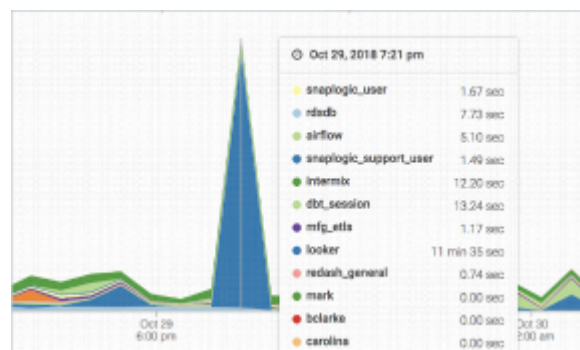

Integrations with popular workflow orchestration tools, and monitoring and alerting platforms to stream custom performance metrics for your workloads.

06

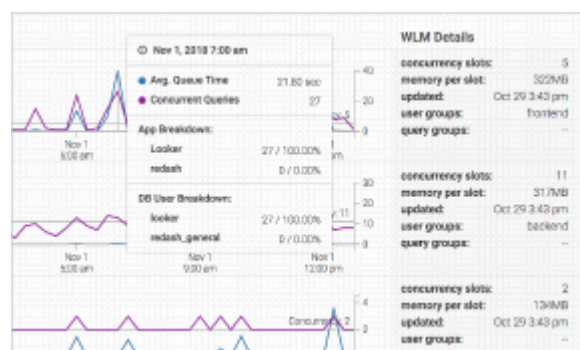

SOLUTIONS

What kind of questions can you answer with Integrate.io?

- 1 **WHY WERE THINGS REALLY SLOW AT 8AM THIS MORNING?**

- 2 **WHERE DO I HAVE CONTENTION CAUSING A BOTTLENECK?**

- 3 **WHAT TABLE(S) CONTRIBUTED TO A SPIKE IN OVERALL DISK UTILIZATION?**
