

About Us

Clipboard is shaping the way schools are able to deliver great extracurricular activities and programs, enriching the student experience in sports and activities like music or debating. The Clipboard EMS (Extracurricular Management System - see clipboard.app/ems) helps extracurricular providers save huge amounts of time and money, ensures schools meet their duty of care, and enhances communication to staff, students and parents.

Clipboard has recently closed a seed round and graduated from muru-D, one of Australia's most competitive startup accelerator programs, run by Telstra. The Clipboard platform is currently relied upon by over 35 schools and extracurricular providers across APAC. As we continue our global growth, it is extremely important that we are able to provide world-class features and service.

Clipboard runs on the latest web technologies, including Angular 8, Node.js and Express, PostgreSQL, and related technologies.

About You

You are an ambitious web developer comfortable with working across front-end and back-end technologies. You enjoy diving into hands-on software development – developing solutions from the ground-up, going right through to deployment into production. You love tech and thrive in an innovative startup culture.

You are a driven, hard worker, and have a desire to make an impact on our mission to improve the lives of all students worldwide through extracurricular activities.

Responsibilities

- Developing features from idea through to production deploys
- Debugging performance issues, proposing structural improvements, and implementing important changes and optimisations
- Participating in sprint planning and retrospectives, design meetings, hiring interviews, product planning sessions and code reviews
- Own important, high-impact projects in an agile work environment
- Provide mentorship and guidance to new starters

Required Experience & Skills

- Bachelor's degree in Computer Science or a related technical field, or equivalent practical experience
- Minimum 2 years' commercial experience of web development, or equivalent experience
- Experience building SPAs with a front-end framework, preferably Angular
- Experience building Node.js web services
- Strong understanding of relational databases, such as Postgres

- Great communication and collaboration skills
- High attention to detail
- Experience with CI/CD tooling and a DevOps workflow

Benefits

- Competitive salary (\$80 000 - \$120 000)
- Ownership in the company through stock options
- Flexible work environment
- Opportunity to be involved in a high-growth business
- Unique chance to challenge yourself, working across a breadth of areas of software development
- Opportunity to make a global impact building an awesome product
