

Microsoft Power Platform creates and promotes opportunities for individuals to improve their technical skills and become more productive in the workplace.

Whether creating custom or organisational solutions, Microsoft Power Platform helps your employees meet current challenges by analysing data, building apps, and automating processes. A low-code application, Power Platform combines the robust power of Power Apps, Power BI, Power Automate, and Power Virtual Agents into one powerful business application platform – providing quick and easy app building and data insights.

## Creating end-to-end business solutions

Certification isn't just for IT professionals, developers, cloud solution architects or cyber experts -It is for any job role that requires proficiency in specialised technical skills.

## **Power Platform Certification**

Power Platform certified employees give your organisation the support it needs to provide a more productive and exciting work environment. The Power Platform certification demonstrates your employees knowledge, skills, and ability to build streamlined solutions to benefit the organisation. This certification path begins with foundational technical skills and then moves onto advanced skills based on industry requirements.
