

Decision making tools and integrated data insights help you to plan your practices. Explore the costs and benefits of practice changes over short and long time horizons, for free in your Carbon by Indigo account. Generate strategies for your farm.

## MY MANAGEMENT, MY PROFIT

### The Soil Health Optimizer *Make a plan to increase your farm's profitability*

The Optimizer is the central place to identify agronomic challenges, map out carbon farming practice plans, and understand what the changes will mean for your farm. The information provided is backed by scientific recommendations and insights. When you're set on a plan for a field, you can save it and use it as documentation in your next Carbon Harvest.

#### Cover Crops

##### Cover Crop Selector

How do covers help me solve agronomic challenges?

##### Cover Crop Species Explorer

How do I explore cover options myself?

##### Nitrogen Generation Estimator

How much plant-available nitrogen can I generate with cover crops?

#### Profitability

##### Carbon Calculator

Does carbon farming make sense for my bottom-line?

##### Advanced Calculator

Can I calculate a more specific payment estimate?

#### Tillage

##### No-till Savings Estimator

How does changing tillage practices save money?

#### Practice Changes

##### Practice Change Explorer

What do I need to do to get paid?

## READY TO START?

Unlock more profit with practices that support your business in good years and in bad years. Indigo is here to support you from decision making through to practice adoption and Carbon Harvest, each and every year. **Build your carbon farming plan.**

### High-quality Estimates and Recommendations

All our calculators and recommendations are developed with Indigo agronomists using trusted sources in the agriculture industry, including university research and the USDA. Default numbers are based on custom rate surveys for your region and practices, and you can edit the defaults to ensure the most accurate estimate.
